Roxio Creator Software: CD Burning

1) Plug in the external CD/DVD drive

- You will need to borrow one of the external CD/DVD drives from the Reference desk.
- Plug the drive into the USB port directly behind the right side of the computer monitor (as shown below).

External CD/DVD Drive

2) Open Roxio Creator NXT 9

- Open the Roxio Creator program on the left of the desktop.
- Navigate to the "Copy Disc" option on the bottom of the Roxio home page.

3) Copy your original CD

• First, push the button on the front right of the drive to open. Then insert your disc.

• Roxio should detect the source and destination drives (most likely, Drive D). If not, you can choose the drive manually. The **Copy From** and **Copy To** will be the same drive.

	Dell DVDRW DL (D:) CD-ROM, Closed, Multisession, Audio (Unknown Album, 01:06:30) (A temporary image will be created.)

- Click the "Copy" button (on the lower right) to create a temporary image of the CD.
- The temporary disc image will begin to save. The screen will appear as shown below.

4) Burn your image to a blank CD

• When finished, Roxio will prompt you to replace the original CD with a blank one. Then click "OK."

• The message "Your project was completed successfully" will show when your disk is complete and the disc drive will open.

5) Check to make sure the CD works

- After burning, you can verify that the copy is successful by playing it on the computer.
- Reinsert the CD into the disc drive. Click the "Select to choose what happens with audio CDs" popup at the lower right of the desktop.
- Another popup window will appear on the upper right. Choose "Play audio CD."

DVD RW Drive (D:) Audio CD

Select to choose what happens with audio CDs

If this doesn't work, open "File Explorer" (the manilla folder on the bottom of the desktop).

• Right click DVD drive. Click "Show more options" at the bottom. Click "Open Auto Play" and then "Play audio CD."
