

Download a pre-designed 3d file from Thingiverse.com

1. Go to <http://www.thingiverse.com/> in a web browser.
2. Type a search in the upper right and hit enter on your keyboard.
3. Scroll through the results and click on a model you would like to look at more.
4. Take a look at it. If you actually like it, click the “Thing Files” button.

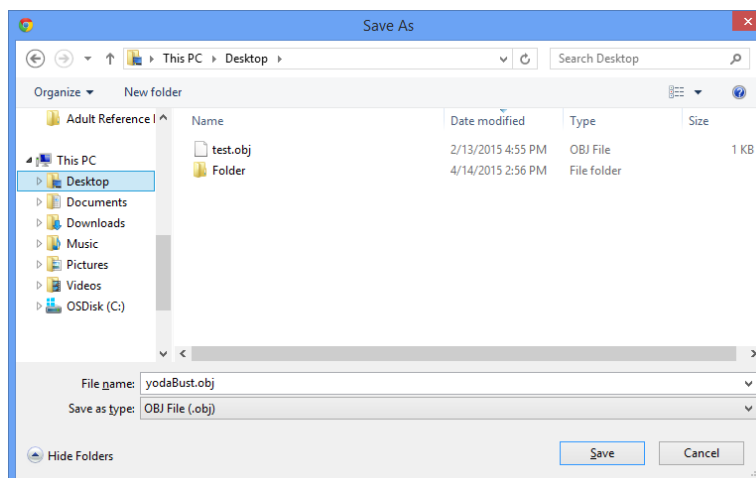

5. If the *thing* has *files* that end in either .STL or .OBJ, our LulzBot Mini 3d printer can print them.

File Name	Downloads	Size
 yoda_Bust.stl <small>Last updated: 08-10-11</small>	18148	147mb
 yodaBust.obj <small>Last updated: 01-05-14</small>	5364	91mb

Either of these file types work with our 3d printer

6. Click on either a .STL or .OBJ file to download it.
7. Save it to somewhere on your computer you’ll remember, like your **Desktop, Documents, or Downloads** folder.

8. Now you’re ready to upload that file to us at <http://www.eapl.org/create/forge/3d-print-job-submission> .
