

## Submit a 3d print job through our website

1. Create a 3d object using a 3d computer aided design program like Tinkercad, 3dTin, AutoDesk, or download a pre-made object from a site like Thingiverse. We can accept .STL or .OBJ 3d object files.
2. Save it to somewhere on your computer you'll remember, like your **Desktop, Documents, or Downloads** folder.
3. Go to <http://www.eapl.org/create/forge/3d-print-job-submission> in a web browser.
4. Fill out your name, library card #, email address, and phone number.
5. Click the circle button for the color you would like your object printed in. You may only select one color.
6. To send us your file, click the "Choose File" button, and then go to the location you saved your 3d file. Single click the file, and then click "open".

7. The file name should appear where it previously said "No file chosen".

8. Click "Upload to the right".
9. Uploading takes a while. It has uploaded successfully when it says "Remove".

10. If you have any comments about your 3d print job, type them in for us.
11. Click "Yes" if you want your object displayed until you pick it up or "no" if you don't.
12. Click the button pictured below once.

Please click once to submit. This may take a moment.

13. Yay! Your 3d print job has been submitted. We will email you when it has been completed.
